PROFILE

Self-taught backend developer and Web Application Development (DAW) student, focused on Java 21 and Spring Boot. I design and ship software end to end: an open source library on Maven Central and distributed systems using microservices and Apache Kafka, applying SAGA and Circuit Breaker patterns to ensure consistency and idempotency under failure. My focus is on owning the full development cycle—from architecture to deployment—and on measurable outcomes, not on collecting technologies in isolation.

TECHNICAL SKILLS

Languages and frameworks: Java 21+, Spring Boot, Spring Security, Spring Data JPA, Spring Cloud, NestJS (TypeScript), React
Architecture: Microservices, Apache Kafka (event-driven), Clean Architecture, SAGA pattern (choreography), Circuit Breaker (Resilience4J)
Security: End-to-end authentication, authorization and auditing schemes; OAuth2 (Authorization Code + token relay), SAML/OAuth2 standards, identity management (IAM)
Data: PostgreSQL, MySQL, domain modelling with JPA
Tools: Docker, Docker Compose, Git and GitHub, API documentation with OpenAPI, CI/CD
Soft skills: Open source collaboration (maintaining a library with external contributors), distributed systems problem solving, proven self-directed learning (Java, Spring, Kafka and cloud-native patterns alongside full-time studies)

PROJECT EXPERIENCE

- Prompt Link** — open source library · Java 21 · Spring Boot 4 · Maven Central 03/2026 – Present
- Reusable Java client for generative AI (OpenRouter: GPT-4, Claude, Llama) with Spring Boot autoconfiguration, published on Maven Central under the MIT license.
 - Designed the authentication interceptor to live only within the OpenRouter Feign Client context, preventing the API key from leaking into other Feign clients of the consuming application.
 - Implemented typed error handling (AiClientException) distinguishing HTTP error, network failure, invalid response and configuration error via custom status codes (-1 to -4).
 - Added token streaming over WebFlux (Flux<String>) and configurable retries with exponential backoff; released version 1.1.0 with 22 commits and 1 external fork.
 - Documented in the changelog a critical security fix (API key leak between Feign clients) found and fixed in version 1.0.3.
- OrderFlow** — microservices · Kafka · OAuth2 · Docker 04/2026
- Order management platform with 8 microservices (Java 21, Spring Boot 4, Spring Cloud), asynchronous Kafka events and end-to-end OAuth2 security.
 - Designed the order flow with a choreography-based SAGA pattern: Order → stock reservation in Inventory → Payment → confirmation or rollback, fully coordinated via Kafka events.
 - Built a custom Authorization Server (OAuth2, Authorization Code flow) with the Gateway acting as an OAuth2 client that validates and forwards the JWT to internal microservices (token relay).
 - Added Circuit Breaker (Resilience4J) to the product and inventory Feign clients, plus per-order idempotency via a UUID key to prevent duplicate processing.
 - Documented the API with OpenAPI/Swagger at the Gateway and orchestrated all 8 services with Docker Compose (Kafka + Zookeeper).
- FinanceTracker Monolith-API** — Java 21 · Spring Boot · PostgreSQL · AI 03/2026 – 08/2026
- Personal finance API integrating Prompt Link (my own library) for automatic expense analysis, categorization and a conversational financial assistant.
 - Modelled the User → Account → Transaction domain with strict data isolation and dynamic monthly/yearly financial reports over a layered architecture.
 - Secured the API with JWT and Spring Security, and centralized global error handling with @RestControllerAdvice.
 - Exposed 3 AI endpoints (automatic analysis, financial chat, expense categorization) consuming my own library in production, validating it in a real use case.

More projects (including ChallengeHub: a gamification API with JWT and role-based access control) at adrian0511.dev and github.com/adrian0511

EDUCATION

- Higher Technical Degree in Web Application Development (DAW)** — Davante, Spain (online) 09/2026 – Present
- High School Diploma** — IPVCE Luis Urquiza Jorge 2020 – 2023
