

# ADRIÁN ARSENIO GARCÉS JIMENEZ

## BACKEND DEVELOPER

Mompía, Cantabria, Spain | +34 603 18 62 98 | [adriangarcés0310@gmail.com](mailto:adriangarcés0310@gmail.com) | [linkedin.com/in/adrdev](https://linkedin.com/in/adrdev) | [adrian0511.dev](https://adrian0511.dev) | [github.com/adrian0511](https://github.com/adrian0511)

## PROFESSIONAL SUMMARY

Self-taught Backend Developer specializing in Java 21 and Spring Boot. I published an Open Source library on Maven Central and built distributed systems using microservices and Apache Kafka, applying patterns such as SAGA and Circuit Breaker. I combine strong technical fundamentals with a collaborative, problem-solving mindset — gained from contributing to open source and leading my own projects end to end — and I'm looking for a role where I can apply my passion for clean, scalable code to solve real-world problems.

## SKILLS

**Languages & Frameworks:** Java 21+, Spring Boot, Spring Security, Spring Data JPA, Spring Cloud, NestJS (TypeScript), React

**Architecture & Messaging:** Microservices architecture, Apache Kafka, Clean Architecture, SAGA pattern, Circuit Breaker (Resilience4J)

**Security & Data:** JWT, OAuth2, PostgreSQL, MySQL

**Tools & Practices:** Docker, Git & GitHub, OpenAPI documentation, HTML, CSS, JavaScript

**Soft Skills:** Team collaboration (delivered an Open Source library used by outside contributors), problem-solving (designed distributed transaction handling with the SAGA pattern), self-driven learning & adaptability (self-taught across Java, Spring, Kafka, and cloud-native patterns while studying full time)

## FEATURED PROJECTS

### Prompt Link [Java 21](#) · [Spring Boot](#) · [Maven Central](#)

Open Source library for Generative AI integration (OpenRouter), published on Maven Central with Spring Boot auto-configuration and a Feign client with unified error handling.

- Designed for extensibility via Inversion of Control (IoC), allowing consumers to plug in custom behavior.
- Managed the complete release pipeline: GPG signing, Sonatype publishing, and MIT licensing.

### FinanceTracker Monolith-API [Java 21](#) · [Spring Boot](#) · [PostgreSQL](#) · [AI Integration](#)

Smart accounting system integrating AI (GPT/Claude) for automatic expense analysis and a financial assistant.

- Modeled the domain (Users, Accounts, Transactions) with Spring Data JPA and PostgreSQL.
- Secured the API with JWT and Spring Security; built monthly/annual analytical reports.
- Applied Clean Architecture with global exception handling via @RestControllerAdvice.

### OrderFlow [Microservices](#) · [Kafka](#) · [OAuth2](#) · [Docker](#)

Order management platform built on a microservices architecture with Java 21, Spring Boot, and Spring Cloud (Eureka, Gateway, OpenFeign).

- Implemented asynchronous, event-driven communication with Apache Kafka and the SAGA pattern (choreography).
- Secured services with OAuth2 (Authorization Code + JWT) and token relay; added Resilience4J for Circuit Breaker.
- Ensured idempotency, documented the API with OpenAPI, and containerized the full environment with Docker Compose (Kafka + Zookeeper).
